

JIRA Server - Version 2.3.0

Released for JIRA SERVER on Mar 22, 2017

In this release we introduce the triggers - automatic synchronization allowing to define rules in the when-if-thenSync style.

No more need to set up post-functions for all of the workflows

This version introduces Triggers - synchronization automation rules, which allow to easily configure, which issues should get automatically synchronized.

Define a JQL statement, which would show, which issues should get automatically synchronized, and whenever a new issue is created or is updated, fitting that JQL statement, it gets Exalated.

Improvements and Fixes

- JIRANODE-1624 - As an admin I would like to configure sync automation rules
- JIRANODE-1635 - Move the Old Trigger Settings from Triggers to General Settings
- JIRANODE-1148 - Expiration error gets repeated
