

Polling frequency configuration

The Exalate app allows configuring how frequently does a Private Instance poll for changes from the remote Public Instance.

You can set the custom interval in seconds.

Polling interval (in seconds)

The interval used by Exalate to poll destination instances for getting sync data if they cannot access your instance

Configuration

1. Navigate to the **General Settings** in the Exalate admin menu
2. Click **Configure** button
3. Input desired value for the interval in the **Polling interval** field
4. **Save** changes
