

This mapping is not supported

Problem

I can't map in-between in Exalate visual connection.

Cause

The visual mode supports a basic set of fields that can be mapped between instances.

Error rendering macro 'excerpt-include'

User 'null' does not have permission to view the page.

Solution

Use a script rule to define the mapping of fields with different data types. Check [script rules examples](#) for more details.

You can also [request a new field mapping](#).
