

Install Exalate Server for HP ALM/QC

Exalate architecture requires installing one Exalate application for each [instance](#).

As far as HP ALM/QC does not offer any integration option for plugins, you need to install a separate server to store the Exalate for HP ALM/QC application and configure it to communicate with your HP ALM/QC.

System requirements

[Check all requirements](#) before installing the Exalate app for HP ALM/QC

Choose your Installation Option

- either [As Docker image](#)
- or [As RPM package](#)
