

# Exalate for Jira on-premise: Syncing issue links to a custom field with Jira Issue Link API

JIRA ON-PREMISE

This article describes how to sync issue links details to a custom field using JIRA Issue Link API.

## Source side

Send over the issue link details

### Outgoing sync

```
replica.issueLinks = issue.issueLinks
```

## Destination Instance

Add the script below in the **Incoming sync** of the **Destination instance** to receive *issue links* information from the Source Instance.

```
// add the links information to the custom field  
issue.customFields."Custom field name".value = replica.issueLinks.toString()
```
