

How to configure a file list picker

Introduction

If you want to configure a drop down box containing all the issues of the containing issue.

The screenshot shows a Jira issue page for 'Table Grid Testcases / TGT-10' with the title 'Example file list drop down'. The issue has a 'grid generic' component. A dropdown menu is open, showing a list of files: 'Hydrangeas.jpg', 'Chrysanthemum.jpg', and 'Hydrangeas.jpg'. A yellow callout box points to this list with the text: 'The drop down lists all files contained in the issue'. Below the dropdown, the 'Description' is 'None'. The 'Attachments' section shows two images: 'Chrysanthemum.jpg' (859 kB, 10/Jun/14 11:03 AM) and 'Hydrangeas.jpg' (581 kB, 10/Jun/14 11:03 AM). The right sidebar shows the issue is reported by 'idalko' and has 0 votes. The 'Watchers' section shows 'Stop watching this issue'.

Solution

This step is very simple - just add a column with following configuration

```
#
# Define a column which will contain the filename
#
gd.columns = filename
gd.tablename = files
gd.ds = igriddtest

#
# This column is a dropdown list, initialized from the list of attachments linked to the issue
#
col.filename = Filename
col.filename.type = list
col.filename.query = select filename, id from fileattachment where issueid = {0}
col.filename.query.parameters = issue:id
col.filename.query.ds = jira
```
